Background
背景

The Hong Kong ICT Awards (HKICTA) aims at recognizing and promoting outstanding information and communications technology (ICT) inventions and applications, thereby encouraging innovation and excellence among Hong Kong's ICT talent and enterprises in their constant pursuit of creative and better solutions to meet business and social needs.

The HKICTA was established in 2006 with the collaborative efforts of the industry, academia and the Government. Organised by the Digital Policy Office, and led by Hong Kong ICT industry associations and professional bodies, the Awards aims at building a locally espoused and internationally acclaimed brand of ICT awards.

There are eight categories under the HKICTA 2024. There is one Grand Award in each category, and an "Award of the Year" is selected from the eight Grand Awards by the Grand Judging Panel. In addition, in a bid to foster the innovative use of artificial intelligence (AI), each of the eight categories has established a new distinguished accolade: the "Best Use of AI" award, magnifying and honouring outstanding achievements in harnessing the power of AI in respective areas.

香港資訊及通訊科技獎旨在表揚及推廣優秀的資訊及通訊科技發明和應用，以鼓勵香港業界精英和企業不斷追求創新和卓越，謀求更佳和更具創意的方案，滿足企業的營運需要，造福社會。

2024香港資訊及通訊科技獎設有八個獎項類別。每個類別均設有一個大獎，而最終評審委員會再從八個大獎中甄選出「全年大獎」。此外，為了激發更多人工智能的創新應用，每個獎項類別都增設一個嶄新獎項：「最佳人工智能應用」獎，以彰顯並表揚那些在相關範疇應用人工智能方面取得傑出成就的參賽作品。

Over the years, the Hong Kong Council of Social Service (HKCSS) has worked closely with different sectors to promote social innovation and gerontechnology, striving to improve the lives of seniors, disadvantaged groups, people with disabilities, and carers. We are proactively promoting digital transformation within the social welfare sector and adopting technology in service innovation, helping NGOs address the challenges of the digital age and advance social services into a new chapter.

This year, we are honored to be the Leading Organiser of the Smart People Award again, which is comprised of the 3 streams of Smart Ageing, Smart Empowerment and Smart Transformation (Solution for Charitable Sector), in order to achieve the goal of ICT integration for all. New streams of "Smart Empowerment" and "Smart Transformation" aim to empower the disadvantaged groups in responding to the challenges brought about by the information technology era, as well as to showcase the various practices of NGOs in digital transformation. It's encouraging to see many high quality and people-centric entries, which fully demonstrate the innovation and creativity in social services. We look forward to addressing the needs of vulnerable communities, filling service gaps and facilitate more service innovation.

I would like to take this opportunity to congratulate all winners and thank all the entrants for embracing ICT for all and supporting digital inclusion. Your creativity, efforts and contributions will enhance the knowledge and application of ICT among the general public. We share the same mission in promoting the use of ICT in the community and together we will build a just and caring smart city.

多年來，香港社會服務聯會（社聯）一直與許多不同界別緊密合作，推動社會創新及樂齡科技，致力改善長者、弱勢社群、殘疾人士以及照顧者的生活。社聯亦正積極推動社福界之數碼轉型，並以科技實現服務創新，幫助本地非牟利機構應對數碼化時代的挑戰，促進社會服務邁進新一頁。

今年，我們很榮幸得以再次籌辦「智慧市民獎」，當中分為三大組別：智慧樂齡、智慧充權和智慧轉型(慈善機構方案)，而新增組別「智慧充權」和「智慧轉型」旨在增強弱勢社群應對資訊科技時代帶來的挑戰之能力，以及展現社福機構就數碼轉營之各種實踐，同時推動資訊科技在不同範疇的應用，讓所有年齡、社經背景及不同能力的人士，均能體會資訊科技在各生活範疇上的便利。我們樂見整體參賽作品的水準極高，能夠以使用者為本，真正了解他們的需要，研發結合創新科技元素的方案之餘，社福機構之運營能力和效率亦得以提升，令人鼓舞。我們將繼續鼓勵社會關注資訊科技在弱勢社群的應用，改善生活品質，成為提供高效服務和滿足需求的重要工具。

我謹恭賀各得獎者，並感謝各參賽者在推動數碼共融作出的重要貢獻。你們的創意和積極投入，使大眾對資訊科技的認識和應用水平不斷提升。我期待更多本地初創研發者，透過資訊及通訊科技，回應社會需要及開拓新的服務領域。

"VICTOR" - VR Training Protocol for Early Childhood Professionals

The VICTOR project aims to enhance the professional competence of childcare workers in Hong Kong's childcare centers (CCCs) and Early Education and Training Centers (EETCs) by addressing significant training gaps. A study revealed that high percentage of childcare workers felt unconfident to care for infants and toddlers, highlighting the urgent need for improved training programs.

Leveraging successful global practices in virtual reality (VR) training, particularly in medical fields, VICTOR is designed to provide immersive, real-life simulation experiences for early childhood professionals. The project employs a structured F.I.D framework (Facilities, Intervention mode, Data-informed practice) to develop VR training scenarios that allow staff to practice essential skills and receive real-time feedback. Data collected during VR training will inform tailored professional consultations with allied health professionals as needed.

By improving workforce professionalism and safety in handling high-risk infants, VICTOR aims to elevate the quality of early childhood education and training services, while also addressing demands for flexible training solutions. With continuous optimization, VICTOR holds potential for expansion, including training for new parents, thereby enhancing the overall childcare landscape.

"VICTOR" 嬰幼專業培訓 - 虛擬實體混合模式新推展

VICTOR提供沉浸式的VR體驗令提供嬰幼兒關顧服務的工作員學習到不同照顧或訓練微技巧。該項目以結構化的F.I.D Innovation 為框架（Facilities-設施、Intervention mode- 介入模式、Data-informed practice-數據指導），開發出VR培訓場景，使專業同工能夠練習關鍵技巧並獲得即時反饋。在培訓過程中，VICTOR會收集及分析數據，然後顯示出需要治療師個別指導的專業同工出來，使他們可以得到量身定制的專業諮詢，並與相關治療師進行面對面的指導。

通過VR，VICTOR旨在提升嬰幼兒關顧服務的專業素養及在處理高風險嬰幼兒時的安全性，同時以靈活的方法讓參加者調整其培訓步伐。隨著持續優化，VICTOR具擴展潛力，未來還可延伸至新父母的培訓，進一步為香港提供持續進步的嬰幼兒照顧支援。

Privacy-Preserving Elderly Monitoring with a Novel Edge AI Camera

Hong Kong is facing the pressing escalating challenge of ageing. In order to alleviate elderly home labour shortage and facilitate elderly care, the government has been advocating aging in place and intergenerational caregiving.

The edge AI camera and system has been under research and development in Prof. Gary Chan' s research team for years. HKUST is collaborating with Alpha Vision Technology Limited and Lotus International Charity Foundation to launch the system as "SafeOne", providing healthcare and monitoring for the daily lives of the elderly.

By streaming the activities of the elderly, summarizing the activities and providing real-time alerts, the product improves the monitoring experience of caregivers with privacy protection, and supports active detection of life-threatening situation to safeguard the life of singleton elderly. The system uses a camera based edge AI to ensure that all data is processed locally and no images or videos can be recorded or transmitted, thereby ensuring the user's privacy and confidentiality.

創新的邊緣人工智能攝影機: 保障私隱 看護長者

香港正面臨日益嚴峻的老齡化挑戰。為紓緩安老機構人力不足的問題及提升長者護理水平，政府一直提倡居家安老和跨代照顧。

陳雙幸教授的研究團隊中進行了多年邊緣人工智能攝影機和系統的研究和開發。研究團隊與領先智能科技有限公司及蓮花國際慈善基金會合作推出名為『一步安心』的系統，為長者的日常生活提供健康看護和監察。

通過持續檢測長者的活動，判斷危險行為並發出即時警報，產品提高了照顧者的看護體驗，亦同時對私隱進行保護，主動檢測可能危及生命安全的狀況，從而保護獨居長者的生命安全。系統使用了基於邊緣人工智能的攝影機，確保在本機處理所有數據並不會留下任何紀錄、輸出或傳輸圖像或視頻，從而保護了使用者的私隱和資料的保密性。

SAFERIN

The elderly care facilities are facing a severe manpower shortage, compounded by a rapidly aging population. This situation forces caregivers to attend to multiple elderly individuals simultaneously, increasing their workload and hindering the immediate response to the various needs of seniors. Consequently, this raises the risk of accidents and negatively impacts the quality of life for the elderly.

SAFERIN integrates three innovative features to address these challenges.

1. Nurse-On-Demand System - Utilizes artificial intelligence technology to proactively analyze the needs of elderly, prioritizing the severity according to urgency and dispatching caregivers automatically, thereby effectively reducing waiting times.
2. Smart Guardian Alert System - Employs non-inclusive sensors to detect any abnormal behaviors among the elderly (such as falls, wandering, etc.), ensuring their safety.
3. Ez-HealthCare System - Automatically analyses the health conditions and risks of elderly, facilitating caregivers in recording and managing health data, and developing appropriate care plans.

By enhancing the quality of services provided in the elderly care facilities, elderly can receive more timely and appropriate attention, ensuring a more comfortable and secure later life.

智護老

安老院舍面臨嚴重的人手短缺問題，加上日益增長的人口老化，迫使護理員需同時照顧多名長者，增加了他們的工作負擔，也使長者的各項需求無法得到即時回應，增加發生意外的風險，影響長者的生活品質。

「智護老」通過整合三大創新功能為一體，以應對上述挑戰：

1. 快護通 - 使用人工智能主動分析長者需求，按其緊急程度進行優先排序並自動調配護理員，有效縮短長者等候時間
2. 護老警衛 - 使用傳感器檢測長者異常情況（如跌倒，遊走等），保障長者安全
3. 護理易 - 自動分析長者的健康狀況及風險，並方便護理人員記錄和管理長者健康數據，制定合適的護理方案

通過提升院舍服務質素，長者可獲得更妥善和適時的照顧，安享晚年生活。

Head to Head Fighting and Fall Detection System

The Department of Electrical and Electronic Engineering at the University of Hong Kong has developed a ground-breaking technology named "Head to Head Fighting and Fall Detection System." This system overcomes the limitations of analysing single static images by enabling real-time analysis of human posture and movements, effectively detecting situations that require attention. By utilizing edge computing, the technology allows skeletal information and identification of key points on the body with the video footage from CCTV cameras after process by the GPU processor.

The system can recognize behaviours of residents in care facilities, such as fighting or falling, and will trigger an alarm upon detecting anomalies. By processing footages at the edge, it ensures that images from places that require privacy like bathrooms and bedrooms, will not be stored nor will it be accessed by any person to safeguard residents' privacy.

Furthermore, the technology includes an anomaly handling system that allows care facility managers to easily review incidents and take appropriate follow-up actions, such as instructing staff on further investigation on the cases and report to supervisors. As a result, the efficiency and accuracy of incident management is enhanced so as the safety and well-being of the residents.

需關注行為及跌倒偵測系統

香港大學電機電子工程系運動人工智能實驗室研發嶄新「需關注行為及跌倒偵測系統」，打破分析單張靜態圖像信息的局限，系統可實時分析影像中人體的姿勢及動作，準確有效地偵測需關注情況。這技術利用了邊緣計算，來自閉路電視攝影機的視訊影像被輸入 GPU 邊緣處理器以提取骨架資訊，可以偵測到身體的關鍵點。

系統可以確定院舍院友的行為，例如打架、倒下等，一旦發現異常情況就會觸發警報。把影像在邊緣GPU分析處理，確保在私隱地方包括睡房、洗手間的影像不會儲存及被其他人看到，保障院舍院友私隱。

除了AI檢測系統之外，還配以一個異常狀況處理系統，讓院舍負責人可以容易地翻查異常狀況，並作出適當的跟進，例如要前線同事跟進個案、或要上報上司，以加強事故處理效率和準確度。
